

Search Terms for COVID-19. The far right-hand column identifies (indicated by a “Y”) the new COVID-19 terms and revisions in the updated version of MedDRA 23.0 that users may consider when searching databases for relevant COVID-19 concepts. First, new HLT Coronavirus infections can be used to retrieve COVID-19 and other coronavirus infections. At the PT and LLT levels, relevant terms for a COVID-19 related search are also identified. Thus, this search strategy is designed to search a database with all of the PTs and LLTs with a “Y” indicated in the far right-hand column (Search Terms for COVID-19). A conservative approach has been taken towards this search strategy and users may choose to include or exclude terms according to their needs. Of note, the unqualified test name term, PT SARS-CoV-2 test, and its subordinate LLTs have been included because the fact that a test for the virus was performed could be of potential relevance in identifying cases who are suspected of having the infection.
